Create a pet

pets · https://cbotai.shahrear.msf.bd/docs/create-a-pet/

POST `/pets`

Code Samples

```
curl --request POST \
  --url 'https://petstore.example.com/v1/pets' \
  --header 'Content-Type: application/json' \
  --data '{
    "name": "Mochi",
    "tag": "cat"
}'
```

```
const response = await fetch('https://petstore.example.com/v1/pets', {
  method: 'POST',
  headers: {
    'Content-Type': 'application/json'
  },
  body: JSON.stringify({
    "name": "Mochi",
    "tag": "cat"
})
});

const data = await response.json();
console.log(data);
```

```
import requests

headers = {
    "Content-Type": "application/json"
```

```
}

payload = {
    "name": "Mochi",
    "tag": "cat"
}

response = requests.post("https://petstore.example.com/v1/pets", headers=headers, json=payload)

print(response.json())
```

```
<?php
$curl = curl_init();

curl_setopt_array($curl, [
  CURLOPT_URL => 'https://petstore.example.com/v1/pets',
  CURLOPT_RETURNTRANSFER => true,
  CURLOPT_CUSTOMREQUEST => 'POST',
  CURLOPT_HTTPHEADER => [
  'Content-Type: application/json'
  ],
  CURLOPT_POSTFIELDS => '{
    "name": "Mochi",
    "tag": "cat"
}',
]);

$response = curl_exec($curl);
curl_close($curl);

echo $response;
```

```
using System.Net.Http;
using System.Text;

var client = new HttpClient();
var request = new HttpRequestMessage(new HttpMethod("POST"),
"https://petstore.example.com/v1/pets");
request.Content = new StringContent(@"{
```

```
    ""name"": ""Mochi"",
    ""tag"": ""cat""
}", Encoding.UTF8, "application/json");
var response = await client.SendAsync(request);
var body = await response.Content.ReadAsStringAsync();

"""))
    .build();

HttpResponse<String> response = client.send(request, HttpResponse.BodyHandlers.ofString());
System.out.println(response.body());
```

Request Body

Content type: `application/json` — **required**

Field	Type	Required	Description
`name`	string	**Required**	
`tag`	string	Optional	

```
{
    "name": "Mochi",
    "tag": "cat"
```

```
}
```

Responses

201 — Pet created

Field	Type	Required	Description
`name`	string	**Required**	
`tag`	string	Optional	
`id`	integer (int64)	**Required**	

```
{
    "name": "Mochi",
    "tag": "cat",
    "id": 1
}
```

422 — Validation failed

Field	Type	Required	Description
`code`	integer	**Required**	
`message`	string	**Required**	
`fields`	array of string	Optional	

```
{
    "code": 1,
    "message": "string",
    "fields": [
        "string"
    ]
}
```

Response

```
201
{
    "name": "Mochi",
    "tag": "cat",
    "id": 1
}
```

```
422
{
    "code": 1,
    "message": "string",
    "fields": [
        "string"
    ]
}
```
