Enqueue a job

jobs · https://cbotai.shahrear.msf.bd/docs/enqueue-a-job/

POST `/projects/{projectId}/jobs`

Code Samples

```
curl --request POST \
  --url 'https://api.taskflow.example.com/v2/projects/{projectId}/jobs' \
  --header 'Authorization: Bearer YOUR_TOKEN' \
  --header 'Content-Type: application/json' \
  --data '{
    "kind": "string",
    "source_url": "https://example.com"
}'
```

```
const response = await fetch('https://api.taskflow.example.com/v2/projects/{projectId}/jobs', {
  method: 'POST',
  headers: {
    'Authorization': 'Bearer YOUR_TOKEN',
    'Content-Type': 'application/json'
  },
  body: JSON.stringify({
    "kind": "string",
    "source_url": "https://example.com"
})
});

const data = await response.json();
console.log(data);
```

```
import requests

headers = {
    "Authorization": "Bearer YOUR_TOKEN",
```

```
    "Content-Type": "application/json"
}

payload = {
    "kind": "string",
    "source_url": "https://example.com"
}

response = requests.post("https://api.taskflow.example.com/v2/projects/{projectId}/jobs",
headers=headers, json=payload)

print(response.json())
```

```
<?php
