GET `/user/logout`

Code Samples

```
curl --request GET \
  --url '/api/v3/user/logout'
```

```
const response = await fetch('/api/v3/user/logout', {
  method: 'GET'
});

const data = await response.json();
console.log(data);
```

```
import requests

response = requests.get("/api/v3/user/logout")

print(response.json())
```

```
<?php
$curl = curl_init();

curl_setopt_array($curl, [
  CURLOPT_URL => '/api/v3/user/logout',
  CURLOPT_RETURNTRANSFER => true,
  CURLOPT_CUSTOMREQUEST => 'GET',
]);

$response = curl_exec($curl);
curl_close($curl);
```

```
echo $response;
```

```
using System.Net.Http;

var client = new HttpClient();
var request = new HttpRequestMessage(new HttpMethod("GET"), "/api/v3/user/logout");
var response = await client.SendAsync(request);
var body = await response.Content.ReadAsStringAsync();
Console.WriteLine(body);
```

```
import java.net.URI;
import java.net.http.*;

HttpClient client = HttpClient.newHttpClient();
HttpRequest request = HttpRequest.newBuilder()
    .uri(URI.create("/api/v3/user/logout"))
    .method("GET", HttpRequest.BodyPublishers.noBody())
    .build();

HttpResponse<String> response = client.send(request, HttpResponse.BodyHandlers.ofString());
System.out.println(response.body());
```
